Hiring Manager

Capgemini Technology Services

Talent Acquisition Team

Re: Full Stack Developer – Capgemini Technology Services

Dear Hiring Manager,

I am writing to express my keen interest in joining **Capgemini Technology Services** as a Full Stack Developer. As a final-year Computer Science & Engineering student at Parul University with hands-on experience building and shipping full-stack, AI-powered, and cloud-deployed applications, I am excited by the opportunity to contribute to Capgemini's mission of driving technology transformation at global scale.

Over the past year, I have independently designed, built, and deployed several production-grade applications. These include **CivilianShield** — a full-stack civilian safety platform built with Spring Boot, React, and WebSocket, live in production with real users — and a **Context-Enhanced Messaging Platform** featuring AI-powered summarization, containerized with Docker and deployed on Render with zero-downtime setup. Each project required me to architect systems end-to-end: from backend REST

APIs and database design to frontend interfaces and CI/CD pipelines via GitHub Actions.

My freelance work has further sharpened these skills — I have integrated third-party APIs, built WebSocket-based real-time communication layers, and cut deployment time by 50% through streamlined CI/CD workflows. Working across **Java, Spring Boot, Node.js, React, PostgreSQL, and Docker**, I am comfortable navigating the full stack and picking up new tools quickly.

What draws me to Capgemini specifically is the breadth of transformation work you undertake — helping leading organizations reimagine what is possible through technology. I am eager to grow within a global collaborative environment, contribute to cutting-edge engineering projects, and build solutions that create real, lasting impact.

I would welcome the chance to discuss how my background aligns with your team's needs. Thank you for considering my application — I look forward to connecting.

Warm regards,

Penkey Sri Vasu
